SUMMARY

Backend Developer with 2 years of experience building and modernizing enterprise applications using **Java, Spring Boot, and Microservices**. Skilled in designing **RESTful APIs**, writing **unit tests**, API performance optimization, code quality improvement (SonarQube), and CI/CD deployment. Experienced in legacy modernization, database query optimization, and secure backend development.

TECHNICAL SKILLS

Languages: Java, Python, C, SQL

Frameworks & Libraries: Spring Boot, Spring MVC, Spring Security, Spring Data JPA, Hibernate, REST APIs, gRPC

Databases: MySQL, PostgreSQL

Tools & DevOps: Git, GitHub, Maven, Jenkins, CI/CD, Docker, Kafka, SonarQube, JUnit, Mockito, Swagger/OpenAPI, Postman, AI Coding Assistants, GitHub Copilot

Concepts: Microservices, MVC, OOP, Data Structures, Unit Testing, API Optimization, JWT Authentication, Agile

EXPERIENCE

Cognizant Technology Solutions

Backend Developer

Project: Legacy Banking Application Modernization

Bengaluru, India

July 2024 – Present

- Modernized a 20-year-old legacy C++/VC++ banking system into a **microservices-based Java Spring Boot architecture** with a modern web front-end, improving scalability and maintainability.
- Performed **reverse engineering** of a monolithic thick-client application to extract and migrate business logic into modular **Spring Boot services** following the **MVC design pattern**.
- Developed **RESTful microservices** using **Spring Boot, Feign Clients, and DTOs**, enabling seamless integration with enterprise APIs for account suspension and reactivation workflows.
- Optimized backend performance by resolving an **N+1 query** issue, reducing API response time from **1.5s to 30ms**, significantly improving throughput.
- Implemented **unit tests using JUnit** and improved code quality by resolving **SonarQube** issues, increasing code coverage and reducing technical debt.
- Implemented **CSRF protection** and applied secure coding practices to strengthen application security.
- Deployed and automated builds through **Jenkins CI/CD pipelines**, ensuring reliable and continuous delivery.
- Decoupled service layers and applied clean coding standards for a loosely coupled, maintainable architecture, and resolved production issues within **Agile** sprints.

PROJECTS

Patient Management System | *Java, Spring Boot, Microservices, gRPC, Kafka, PostgreSQL, Docker, JWT*

- Built a production-ready **microservices-based patient management system** with a **Patient Service** exposing **RESTful APIs** backed by **PostgreSQL**.
- Enabled inter-service communication between the Patient and **Billing Service** using **gRPC** for efficient, low-latency calls.
- Published **Kafka** events on patient creation, consumed asynchronously by an **Analytics Service** for event-driven processing.
- Implemented an **API Gateway** handling routing and centralized **JWT-based authentication**, and **Dockerized** all services for containerized deployment.

Movie Catalog System | *Java, Spring Boot, Spring Security, Spring Data JPA, MySQL, Bootstrap*

- Developed a full-stack movie catalog web application with full **CRUD operations** and **role-based authentication** using **Spring Security**.
- Used **Spring Data JPA** for ORM and integrated a responsive front-end with **Bootstrap**.

EDUCATION

KLE Technological University

Bachelor of Engineering in Electronics and Communication

Hubballi, India

2020 – 2024 (CGPA: 8.65)
